Project Title: Placement Portal

Brief description:

The project would basically comprise of a portal where the students would login through their ids and would look for the information of the different companies attending the campus for placements and thus all the mails from the companies would be forwarded directly to the account and thus that would reduce the burden of the PCs to forward the information about the company arrival to the campus and also they could look for the placement statistics. Another advantage being that the portal would also have the remote login especially for the companies to view over the placements statistics of the college and thus would help them in understanding the caliber so that they would come to the college for placements hence enhancing the placements of the of the college .The portal would also have the section which would hold the experiences of the pass-out students who have been placed in the respective companies

All these services will be deployed by the means of cloud (Microsoft Azure)

Objective:

To create an user friendly environment that would help the students to access to the information for the placements irrespective of being dependent on any other means

Software requirements: Operating System : Windows
Programming Language : HTML,CSS,Bootstrap,Nodejs
Drivers :
Tools : Power BI
Hardware Requirements: Processor : Intell i3 and above
Memory : 2 GB
Any other devices :

<u>Internal Guide (in college)</u> Name: Designation: Telephone No:	<u>External guide (if in Company)</u> Name: Designation: Telephone No:
College Address:	Company Address:
